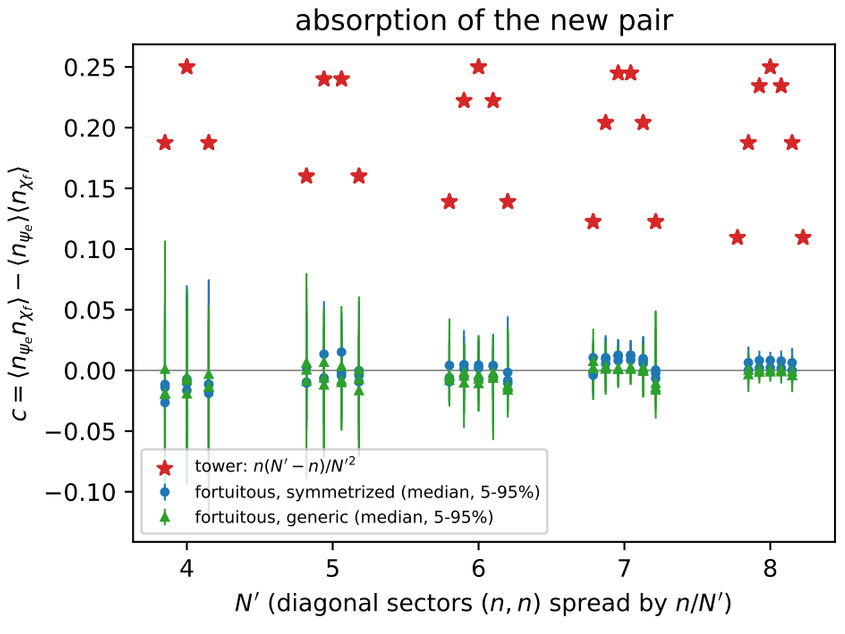
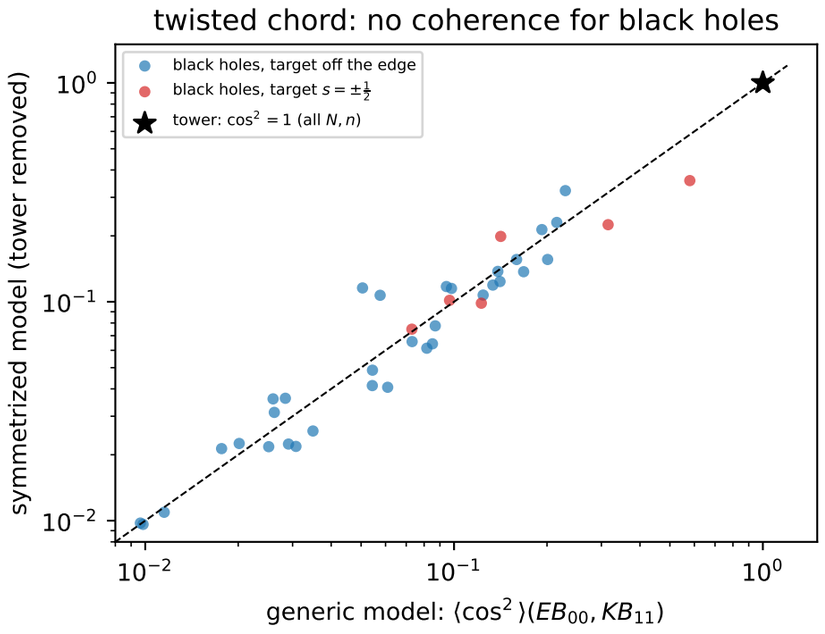
individual emissions; total J cancels to 2e-16
target $|s| \neq \frac{1}{2}$
target $s = \pm\frac{1}{2}$ (gapless)
tower: $\langle t|O^\dagger GO|t\rangle$ (one term)
black holes: $\langle h|O^\dagger GO|h\rangle$ averaged over B



absorption of the new pair
$c = \langle n_{\psi_e} n_{\chi_f}\rangle - \langle n_{\psi_e}\rangle\langle n_{\chi_f}\rangle$
tower: $n(N'-n)/N'^2$
fortuitous, symmetrized (median, 5-95%)
fortuitous, generic (median, 5-95%)
N' (diagonal sectors (n,n) spread by n/N')



twisted chord: no coherence for black holes
black holes, target off the edge
black holes, target $s = \pm\frac{1}{2}$
tower: $\cos^2 = 1$ (all N, n)
symmetrized model (tower removed)
generic model: $\langle\cos^2\rangle(EB_{00}, KB_{11})$
