(a) inner gap
$E_{\min}/\bar{E}$ of the inner family
old size N
gapped target
window-edge target
target in window
(b) dressing-cost tails
$P(\sigma^2 > K)$
chord: $\propto K^{-1/2}$
N'=12 resonant
N'=12 gapped
N'=14 resonant
N'=14 gapped
first-order dressing cost $K = \sigma^2$
(c) resonant sector: low tail
cumulative fraction
exact (—), first order (- -)
N'=12
N'=14
decoder eigenvalue λ ($\ell' = -2$)
